

High Service Pump Station Marco Island, Florida

Project Title: Construction of High Service Pump Station
Project Number: QE 1268001
Customer: City of Marco Island, Florida
Dollar Amount: \$2,975,416.00
Percent Complete: 100%
Completion: February, 2010
Role: Prime Contractor

Project Scope:

This project involved the construction of a 2,000 sf High Service Pump Station building, installation of a 20 ft diameter slaker system silo and installation of a 1.6 MW generator on Marco Island, Florida. Quality Enterprises was the General Contractor for this project and was responsible for the coordination of all building construction, silo construction, electrical and instrumentation installation. QE self-performed installation of all structural concrete, mechanical piping, high service pumps, lift station, utility piping, HVAC units, mechanical louvers, installation of doors and hardware, and all site work paving and sidewalks.
